- + Storage Conservation
- + Single Click Data Restoration

Abhed is a standalone device which can be plugged in LAN and requires a Backup terminal which will host the administrative console of the solution. Abhed can also be physically protected according to the business policies to restrict physical access. Abhed includes a 2.5 inch hard drive (non hot-plug) which is power efficient and consumes very less electricity. The system is available in various capacities such as 500 GB, 1/2/4 TB with several customized options available for large organizations. Abhed is also accompanied with our state of the art backup software. The backup software can be customized according to the requirement of the organizations keen to deploy this solution. While Abhed can be used with existing backup clients in the organization, the accompanied software has a plethora of backup options which range from scheduling backups in the network, encrypting backups and posting data files in the clouds (with various service providers) with various configurable options as per the business requirements.
